Exports contains examples of Sharepoint 2013 REST jobs for Web Service . Two example Connection Objects are also included, List-releated Endpoints and Core Endpoints.

For example:

Name	URI
Lists	lists
Action on List	lists(&listid#)
Action on Object in List	lists(&listid#)/items(&itemsid#)
Action on a List Field	lists(&listid#)/fields(&fiieldid#)

List-related Actions:
Lists - Get all the Sharepoint lists inside the site
Add to List - Add a new List
Delete List - Delete a list with provided ID
Update List - Update List with provided ID

Core Actions:
Site - Represents a collection of sites in a Web application, including a top-level Web site and all its subsites.
